VOLUME 9 1987

SUBJECT INDEX

A2317, 99
  calcium ions
  in vitro
  neurobehavioral effects
Active avoidance, 213
  benzodiazepine binding sites
  diazepam
  passive avoidance
  perinatal exposure
  postnatal exposure
Acoustic startle reflex, 17
  alcohol
  behavioral teratology
  Fetal Alcohol Syndrome
  prenatal exposure
  prepulse inhibition
Adolescent behavior, 9
  caffeine
  diazepam
  neonatal administration
  neonatal behavior
Age differences
  differential effects, 107
  dose differences, 39
  growth, 107
  locomotor activity, 39
  methylphenidate, 107
  nipple attachment, 39
  prenatal exposure, 39
  delta-9-tetrahydrocannabinol, 39
Aggression, 87
  behavior, social
  methylmercuric chloride
  prenatal exposure
Alcohol
  acoustic startle reflex, 17
  behavioral teratology, 17
  birthweight, 79
  blood ethanol concentrations, 243
  caffeine, 79
  cannabis, 79
  cimetidine, 23
  differential deficits, 129
  drug differences, 1
  drug interactions, 1
  Fetal Alcohol Syndrome, 17, 129
  genitalia development 23
  growth, 79
  human studies, 1, 79
  low risk population, 1
  marihuana, 1
  microencephaly, 129
  neonates, 283
  neonatal behavioral correlates, 1
  nicotine, 1
  postnatal administration, 129
  postnatal exposure, 243
  prenatal exposure, 1, 17, 23, 79, 283
  prepulse inhibition, 17
  regional brain growth, 129
  sensorimotor development alterations, 243
  sex differences, 23
  thermoregulation, 283
  thermotaxic behavior, 283
  tobacco, 79
Amphetamine, 113
  catecholamines
  fetal alcohol exposure
  hyperactivity
  undernutrition
Apparatus
  Biel maze, 235
  Cincinnati maze, 235
  Fox test battery, 179
  Morris maze, 253
  Morris water-tank, 253
  thermocline, 283
  Vagal Tone Monitor, 197
Autonomic nervous system, 197
  blood cholinesterase
  dichlorvos neurotoxicity
  dogs
  tone monitoring
Avoidance, 339
  dietary cadmium
  ethanol self-administration
  extinction
  stress
Avoidance-escape behavior, 377
  cholinesterase activity
  soman
  subchronic administration

Baseline level of responding, 387
  pyrethroid insecticide
  schedule-controlled behavior
Behavior, social, 87
  aggression
  methylmercuric chloride
  prenatal exposure
Behavior test studies, 465
  neurobehavioral testing
  psychoneuroendocrinology
Behavioral dysfunctions, 417
  CNS injury systems
  neurotoxicity
Behavioral indices
  identification/characterization of neurotoxicity, 427
  neurotoxicity measurement, 427, 445
Behavioral studies, 411
  conventional toxicity studies
  interpretation of effects
  neurotoxic data assessment
Behavioral teratology
  acoustic startle reflex, 17
  alcohol, 17
  benzodiazepines, 179
  data analysis, 179
  Fetal Alcohol Syndrome, 17
  prenatal exposure, 17, 179
  prepulse inhibition, 17
  test choice, 179
Behavioral toxicology
  experimental approach, 157
  methodological approach, 161
  monkeys, 161
  neurotoxicants, 161
  rodent pups, 157
  ultrasonic vocalizations, 157
Benzodiazepine binding sites, 213
  active avoidance
  diazepam
  passive avoidance
  perinatal exposure
  postnatal exposure
Benzodiazepines, 179
  behavioral teratology
  data analysis
  prenatal exposure
  test choice
Birthweight
  alcohol, 79
  caffeine, 79
  cannabis, 79
  growth, 79
  human studies, infants, 79, 311
  in-utero methadone, 311
  perinatal/developmental outcome, 311
  prenatal exposure, 79
  tobacco, 79
Blood cholinesterase, 197
  autonomic nervous system
  dichlorvos neurotoxicity
  dogs
  tone monitoring
Blood ethanol concentrations, 243
  alcohol
  postnatal exposure
  sensorimotor development alterations
Brain
  brain stem, 67
  cerebellum, 213
  cortex, 213
  dentate gyrus, 33, 129, 359
  frontal cortex, 321, 369
  hippocampus, 33, 67, 129, 213, 321, 359
  hypothalamus, 321, 369
  medulla oblongata, 369
  midbrain, 369
  midsagittal cerebellum, 129
  neostriatum, 277
  pituitary, 145
  pyramidal cell layer, 359
  sensorimotor cortex, 145
  striatum, 369
  striatum griseum centrale, 67
Brain damage correlation, 145
  in utero exposure
  irradiation
  postnatal motor behavior
Brain maturation, 271
  nerve growth factor
  neurobehavioral development
Brainstem auditory evoked potential, 59
  ototoxicity
  theophylline
Brains, rats, 369
  catecholamine concentrations
  dose-dependent effects
  metabolite concentrations
  methyl bromide

Caffeine
  adolescent behavior, 9

alcohol, 79
birthweight, 79
cannabis, 79
diazepam, 9
growth, 79
human studies, 79
neonatal administration, 9
neonatal behavior, 9
prenatal exposure, 79
tobacco, 79
Calcium ions, 99
A2317
in vitro
neurobehavioral effects
Cannabis, 79
alcohol
birthweight
caffeine
growth
human studies
prenatal exposure
tobacco
Carbon monoxide
carboxyhemoglobin, 151, 221, 227, 345
compensatory tracking, 227
event monitoring, 227
fixed-ratio performance, 221
human studies, males, 227
intraperitoneal injection, 221
maze performance, 151
neostriatal development, 277
neostriatum, 277
perinatal exposure, 277
screen-test performance, 221
symptoms of carbon monoxide poisoning, 345
Carboxyhemoglobin
carbon monoxide, 151, 221, 227, 345
compensatory tracking, 227
event monitoring, 227
fixed-ratio performance, 221
human studies, males, 227
intraperitoneal injection, 221
maze performance, 151
screen-test performance, 221
symptoms of carbon monoxide poisoning, 345
Cardiorespirograph, 305
creatine phosphokinase
infant drug addiction
Catecholamine concentrations, 369
brains, rats
dose-dependent effects
metabolite concentrations
methyl bromide
Catecholamines, 113
amphetamine
fetal alcohol exposure
hyperactivity
undernutrition
Cell excitability, 33
dentate gyrus
granule cells
in vitro
trimethyltin
Child abuse, 315
foster care
infants of drug addicts
neglect
Child development, 259
fetal lead exposure
human studies, children
preschool intelligence
Cholinesterase activity, 377
avoidance-escape behavior
soman
subchronic administration
Chronic exposure, 171
discrimination learning
functional tolerance
motor activity
peripheral nerve conduction velocity
trichloroethylene
Cimetidine, 23
alcohol
genitalia development
prenatal exposure
sex differences
CNS injury systems, 417
behavioral dysfunctions
neurotoxicity
Cocaine
down regulation, 301
neonatal effects, 291
perinatal addiction, 301
placenta, human, 301
postnatal effects, 295
prenatal effects, 295
prenatal exposure, 291, 295
Colonic temperature, 193
lead intoxication
thermoregulation
Compensatory tracking, 227
carbon monoxide
carboxyhemoglobin
event monitoring
human studies, males
Conditioned taste aversion, 75
radiation
vagotomy, subdiaphragmatic
Conventional toxicity studies, 411
behavioral studies
interpretation of effects
neurotoxic data assessment
Creatine phosphokinase, 305
cardiorespirograph
infant drug addiction

Data analysis, 179
behavioral teratology
benzodiazepines
prenatal exposure
test choice
Dentate gyrus, 33
cell excitability
granule cells
in vitro
trimethyltin
Diazepam
active avoidance, 213
adolescent behavior, 9
benzodiazepine binding sites, 213
caffeine, 9
neonatal administration, 9
neonatal behavior, 9
passive avoidance, 213
perinatal exposure, 213
postnatal exposure, 213
Dichlorvos neurotoxicity, 197
autonomic nervous system
blood cholinesterase
dogs
tone monitoring
Dietary cadmium, 339
avoidance
ethanol self-administration
extinction
stress
Dietary restriction, 203
neurobehavior
neurophysiological parameters
Differential deficits, 129
alcohol
Fetal Alcohol Syndrome
microcephaly
postnatal administration
regional brain growth
Differential effects, 107
age differences
growth
methylphenidate
Discrimination learning, 171
chronic exposure
functional tolerance
motor activity
peripheral nerve conduction velocity
trichloroethylene
Dogs, 197
autonomic nervous system
blood cholinesterase
dichlorvos neurotoxicity
tone monitoring
Dose-dependent effects, 369
brains, rats
catecholamine concentrations
metabolite concentrations
methyl bromide
Dose differences
age differences, 39
embryotoxicity, 45
growth rate, 45
locomotor activity, 39
maternal nutrition, 45
nipple attachment, 39
prenatal exposure, 39, 45
delta-9-tetrahydrocannabinol, 39, 45
Down regulation, 301
cocaine
perinatal addiction
placenta, human
